Homework 1 Regrade Request/Requery

There is one question I have questions about. The question and the answer I had is below:

6. If getToken() is called repeatedly on the following input, what is the sequence of tokens returned? 990011016781000101010301234570000010

The sequence of tokens returned when getToken() is called repeatedly on the input 990011016781000101010301234570000010 is R0R0R3R0R0R0R0R2R0R0 R0R0R0R0R3. This is due to R0 being represented by 9, R0 being represented by 9, R3 being represented by 00110, R0 being represented by 1, R0 being represented by 6, R0 being represented by 7, R0 being represented by 8, R2 being represented by 100010101030, R0 being represented by 1, R0 being represented by 2, R0 being represented by 3, R0 being represented by 4, R0 being represented by 5, R0 being represented by 7, and R3 being representing by 000010.

Here is where I have a few requests. First, are may I ask what tokens are wrong in the expression R0R0R3R0R0R0R0R2R0R0R0R0R0R0R3. In the rubric, the reviewer commented "wrong answer" but didn't say which tokens were wrong. If I don't know what tokens are wrong, how can I learn from my mistakes. Second, what are the right tokens in the answer and how did those tokens get returned?
